<p>Drain-running in the N-S direction, fall towards the south. A riser in the eastern side built to fit an E-W main drain run [4076]. A silt trap recorded to the north end to the south of the drain. A partial blocking recorded in the southern part of the drain, possibly a to form a mini silt trap before for the hard parts to set before flowing in the southern silt trap. A large concentration of finds was collected in the fill in this part of the drain.</p> <p>Unlike the abutting drain [4076], as this drain didn't have a peg tile floor, but a brick floor with two bricks stretchers side by side - 2 lengths of a stretcher as a width.</p>
